

Byte Me: A Day in the Life of a Computer Programmer

Byte Me takes the reader through an entire day as seen through the logical mind of a computer programmer. To illustrate the thought processes involved, the book is written in easy-to-read computer code. It follows the programmer from the moment he awakens and has to decide whether or not to press the snooze button, through the tortuous hours of dealing with less than brilliant users, to the evening when he must decide how to spend his free time. Dave Feder has been a computer programmer for the last 32 years and has worked at many different kinds of businesses, dealing with many different kinds of people, and from an IT perspective has seen it all. But despite all those years in the field of data processing, Dave still feels passionate about his writing, and would like to return to his roots as an author. He graduated from Boston University in 1978 with a degree in journalism, and had a short career in writing before he joined the dark side and became a programmer. Dave lives in a suburb of Philadelphia with his wife, three children, three cats, five frogs, and a box turtle.
