It is unfortunate that, notwithstanding the rich mineralogical and agricultural character of Mexico, no thoroughly accurate survey or geological examination has ever been made of the whole country. There is no complete map of the territory which may be confidently relied on. The enterprise of developing Mexico, since the foundation of the colonial government byS pain has been almost entirely abandoned to private enterprise, and, consequently the valuable information, collected by individuals, either perished in their hands after it had been used for their own benefit, or, if imparted to the government, has never been united and collated with other accounts and reconnoissances which were in the hands of national authorities. A great deal was done by Baron Alexander Humboldt, during his visit toN ewS pain early in this century, towards gathering the geographical, geological and statistical information which was then in existence, though scattered, far and wide, over the viceroyalty, in a thousand different hands. His voluminous work is an enduring monument to his industry and talent; but there is necessarily a great deal of it that was altogether transitory in its character both on account of the political and social revolution which has since occurred, and in consequence of the opening, by the

republic, of Mexican ports to the commerce of the world.(Typographical errors above are due to OCR software and dont occur in the book.)About the Publisher Forgotten Books is a publishe
